

PRODUCT OVERVIEW

AuditLens

A structured approach to chromatography audit-trail review.

THE CHALLENGE

Audit-trail review is more than locating system events. Quality teams must interpret activity in context, apply consistent criteria, document reviewer judgment and make decisions that remain traceable.

INTENDED REVIEW JOURNEY

01

Define scope

02

Apply rules

03

Assess events

04

QA disposition

DESIGNED CAPABILITIES

Controlled, SOP-aligned rule configuration; batch-level and system-level review scope; prioritization of potentially significant events; recorded reviewer rationale; QA decisions; and role-based separation of duties.

HUMAN JUDGMENT REMAINS CENTRAL

AuditLens is intended to assist reviewers, not automatically declare records compliant. Review outcomes require qualified assessment and governance appropriate to the organization's intended use.

DEVELOPMENT & VALIDATION STATUS

Pre-commercial software undergoing integration and regression testing. Read-only Waters Empower connectivity is planned, not production-ready. No claim is made that AuditLens is validated, certified or approved for regulated deployment. Site-specific qualification and validation will be necessary.

EARLY CONVERSATIONS

We welcome discussions with QC, QA and data-integrity leaders about a controlled early demonstration. Learn more at qualityadmit.com.
