

QualityAdmit

COMPANY INTRODUCTION

Purpose-built for quality.

Software shaped by the realities of regulated laboratory work.

WHO WE ARE

QualityAdmit is an emerging pharmaceutical quality technology initiative based in India. Our perspective is grounded in more than 15 years of hands-on experience across biologics and pharmaceutical quality control, analytical testing, quality systems and inspection readiness.

WHAT GUIDES OUR WORK

We focus on practical workflows: clear review criteria, controlled decisions, accountability and evidence that can be examined. Our aim is to make complex quality activities easier to navigate without replacing professional judgment.

INTRODUCING AUDITLENS

Our first product, AuditLens, is being developed for structured, risk-based review of chromatography audit-trail events. Its intended workflow brings together configurable rules, reviewer assessment, documented rationale and QA oversight.

WHO WE WORK TOWARD SERVING

Pharmaceutical and biotechnology manufacturers, CDMOs, regulated testing laboratories, and data-integrity or computerized-system validation specialists.

CURRENT STATUS

AuditLens is pre-commercial and under integration testing. Controlled introductory demonstrations are targeted for November 2026; connectivity, security and validation remain subject to verification.
